# DELAYS IN REPORTING THE CONTENTS OF PERIODICALS IN the CURRENT LIST OF MEDICAL LITERATURE

One of our "Priends" of long standing who uses the Current
List to follow the recent literature in a number of medical fields,
notes that the contents of some journals in which he is perticularly
interested, are not listed promptly. Due to this, it has happened on
several occasions that journals containing stricles he desired to read,
had been borrowed, sent to the bindery, or had otherwise become unavailable to him. He also mentioned that many pages of the Current List
are devoted to the titles of articles from foreign journals of several
years standing, and thus not truly current. Unfortunately, both of
these observations are by no means without foundation.

STRANDS!

Wer conditions have made somewhat sporadic the receipt of journals from most European countries. All the numbers for an entire year may arrive simultaneously. The quantity of material to be recorded in the Current List, therefore, varies considerably from week to week, and furthermore, the output of those engaged in typing and arranging the material for publication is by no means uniform. It may happen, therefore, that a current journal of which the table of contents should be recorded immediately, may be crowded out by a large accumulation of journals received from abroad.

The policy of recording the contents of journals received several years after the date of their publication, has been followed in the hope of making the Current List as complete as possible for the period since its beginning in 1941. The amount of this material arriving late, in addition to that from the war-torn areas, has been sugmented greatly by the many hundreds of journals being received in exchange for the Current List. Back numbers of these are frequently presented to the Library, and the policy has been to record the contents of all issues for the years during which the Current List has been published. It is hoped that in this way, the Current List, together with its Indexes, will provide a comprehensive key to the literature for many persons who may not have access to other medical indexes.

(Continued on inside of back cover)

CURRENT LIST OF MEDICAL LITERATURE is published weekly and lists of RECENT BOOK ACQUISITIONS are issued several times per year as supplements. The subscription price for both is \$5.00 per year in the United States and \$5.50 per year in other countries. The RECENT BOOK ACQUISITIONS may be obtained separately at \$1.00 per year. UNFORTUNATE TRENDS in current medical writing
90-2. /Journalism medical/

It may also be mentioned that although the Current List receives very considerable support from the Army Medical Library, it is being published on an extremely narrow margin, and every possible economy in operation is necessary. The amount of material being recorded is steadily increasing so that the number of pages per week is more than the twenty that were sufficient during the early years, and frequently reaches thirty-two pages per week. Subscriptions are increasing steadily but many more will be required before any larger sums can be expended in improving the accuracy and appearance of the publication.

In regard to the irregularities in the promptness with which the contents of the journals are recorded, it may be expected that with resumption of more normal conditions of receipt of journals from abroad and completion of the gaps in the files of those in the Library, it will be possible to organize the work in a manner that will insure more uniformity in recording the contents of journals as they arrive. This will certainly be the endeavor of those under whose auspices the publication is being issued.
